# 1 Executive Summary

## Client characteristics

- A total of 7,072 individuals were treated within the National Gambling Treatment Services (who report to the Data Reporting Framework (DRF)) in Great Britain between April 2021 and March 2022.
- This included 5,996 people who were experiencing problematic gambling behaviour and 1,076 people who were impacted by someone else's gambling ('affected others') or at risk of developing problematic gambling behaviour.
- A large majority of clients (70%) identified as male.
- Three quarters (75%) of clients were aged 44 years or younger. The highest number were reported in the 25–29 years old and 30–34 years old age bands, accounting for 39% of clients in total.
- 88% were from a white ethnic background, including 76% White British and 5% White Other. The next most reported ethnic backgrounds were Asian or Asian British (6%), and Black or Black British (3%) or Mixed (3%).
- Most clients were in a relationship (36%) or married (27%). 30% were single, 4% were separated and 2% divorced.
- Most clients were employed (73%), with 11% identifying as living with long-term sickness and/or disability & not in work, 9% unemployed, 3% looking after family/home and not working, 2% retired and 2% student.
- The proportion of clients seeking help due to another individual's gambling has increased from 10% in 2015/16 to 14% in 2021/22.
- The proportion of female gambling clients increased from 13% in 2015/16 to 21% in 2021/22.

## Gambling behaviour

- Problem Gambling Severity Index (PGSI)<sup>1</sup> scores indicated that most gambling clients (92%) were classed as 'problem gamblers' as defined by the scale (i.e. had a score of eight or more) during initial assessment for treatment.
- The most common location for gambling was online, used by 75% of clients. Bookmakers were the next most common, used by 30% of people who gamble. Use of online services was noticeably higher among younger age groups.
- Between 2015/16 and 2021/22 the proportion reporting use of online gambling services increased from 57% to 75%. In the same time period, the proportion using bookmakers decreased from 56% to 30%.
- Among online services, gambling on casino slots was the most common activity (38% compared to 32% in 2020/21), followed by sporting events (20% compared to 27% in 2020/21) and casino table games (12% compared to 21% in 2020/21).
- Among bookmakers, gaming machines were the most common form of gambling (17%), followed by sporting events (10%) and horses (7%).

<sup>1</sup> See Appendix, section 13.2

- Compared to White or White British people who gamble, those who identified as Black or Black British were more likely to use bookmakers (44% compared to 30%) or casinos (17% compared to 7%). Those who identified as Asian or Asian British were also more likely to use bookmakers (44%) or casinos (17%).
- Most people who gamble (63%) reported having a debt due to their gambling. 11% had experienced a job loss because of their gambling and 26% had experienced a relationship loss. At the point of presentation to gambling services, clients reported having started gambling on average (median) 10 years prior.
- The median spend reported by people who had gambled in the previous 30 days before assessment was £1000, with 50% spending more than this.

### Treatment engagement

- Most referrals into treatment were from the National Gambling Helpline (57%), followed by self-made (26%).
- For clients treated in 2021/22, 50% had a first appointment within five days of making contact and 75% within 12 days.
- Among those receiving and ending treatment in 2021/22, treatment lasted for an average (median) of 10 weeks. Overall, clients received a median of eight appointments within their treatment episode.

### Treatment outcomes

- Among clients who ended treatment in 2021/22, a majority (63%) completed their scheduled treatment. This represents an increase from 59% in 2015/2016, when data were first collected.
- Just under one third (30%) dropped out of treatment before a scheduled endpoint, down from 35% in 2015/16.
- Among people who gamble, PGSI scores improved by an average (median) of 12 points between earliest and last appointment in treatment.
- At the latest point in treatment 72% had a PGSI score of below 8 (the cut-off for being defined as a 'problem gambler' on the PGSI scale), compared to 8% at the start of treatment.
- Improvements in PGSI score were seen in 80% of people who gamble, including 92% in those who completed treatment, compared to 62% of those who dropped out.
- At the end of treatment 60% of clients were defined as 'below clinical cut-off' on the CORE-10 scale<sup>2</sup>, compared to only 20% at the start of treatment.
- Improvements in CORE-10 score were seen in 86% of clients who completed treatment, compared to 53% of those who dropped out. compared to 52% of those who dropped out.

<sup>2</sup> See section 13.3

## 2 About the National Gambling Treatment Service

The National Gambling Treatment Service (NGTS) is a network of organisations working together to provide confidential treatment and support for anyone experiencing gambling-related harms, either as a person who gambles or someone who is impacted by someone else's gambling. The NGTS is free to access across England, Scotland and Wales. The NGTS is commissioned by GambleAware, an independent grant-making charity that takes a public health approach to reducing gambling harms. Wherever someone makes contact with the NGTS network, the providers work alongside each other through referral pathways to deliver the most appropriate package of care.

The data for the 2021/22 period presented within this report covers submissions from the following organisations, with details of the services they provide listed below.

### **GamCare<sup>3</sup> and its partner network offers:**

- Online treatment supported by regular contact with a therapist, which can be accessed at a time and place convenient for the client over the course of eight weeks.
- One-to-one face-to-face, online and telephone therapeutic support and treatment for people with gambling problems as well as family and friends who are impacted by gambling.
- Group based Gambling Recovery Courses delivered face-to-face or online for between six to eight weeks.

### **Gordon Moody offers:**

- Residential Treatment Centres – two unique specialist centres, providing an intensive residential treatment programme for men with a gambling disorder over a period of 14 weeks.
- Recovery Housing – specialist relapse prevention housing for those who have completed the treatment programmes requiring additional recovery support.
- Retreat & Counselling Programme – retreat programmes for women-only-cohorts and men-only-cohorts which combine short residential stays with at-home counselling support.

### **Central and North West London NHS Foundation Trust (London Problem Gambling Clinic) offers:**

- Specialist addiction therapy and recovery to people affected by gambling addiction, as well as those with mental health problems such as depression, anxiety, trauma, and suicidal feelings. They also provide help to also provide help to people close to those with gambling addiction, such as family, partners, and carers.

### **NHS Northern Gambling Service, provided by Leeds and York Partnership NHS Foundation Trust offers:**

- Specialist addiction therapy and recovery for people affected by gambling addiction, as well as those with mental health problems such as depression, anxiety, trauma, and suicidal feelings. also provide help to people close to those with gambling addiction, such as family, partners, and carers.

GambleAware funded treatment providers are required to submit quarterly datasets in a standardised format<sup>4</sup>. This report is informed by analysis of these submissions.

<sup>3</sup> In addition, GamCare operates the National Gambling Helpline which offers telephone and online live chat support providing immediate support to individuals and referral into the treatment service. GamCare also offer information and advice via their website, moderated forums and online group chatrooms. These services are not within the scope of data presented in this report.

<sup>4</sup> <https://about.gambleaware.org/media/2147/gambleaware-drif-specification-june-16.pdf>

### 3 Policy Context

At the time of publishing, GambleAware and others in the sector await the publication of the Gambling White Paper which will outline the Government's proposals for reform to the Gambling Act 2005. GambleAware is a strong advocate for the introduction of a compulsory levy on the gambling industry to be included within the review. The inclusion of such a levy would ensure long-term, sustainable and transparent funding for the essential services that are needed to prevent and reduce gambling harms.

It is likely that the forthcoming White Paper will result in changes to the sector. GambleAware is committed to tackling gambling harms as a public health issue and will continue to do so moving forward. As part of our organisational strategy 2021-2026, we made a commitment to "improving the coherence, accessibility, diversity, and effectiveness of the National Gambling Treatment Service". In our enhanced role as a strategic commissioner, we want to ensure that we improve our outcomes and the way we measure them to ensure the new system is of the highest quality it can be. This leadership role will also ensure that service user safety continues to be paramount and that future treatment providers are supported in their quality and improvement accountabilities.

### 4 The DRF database

The collection of data from clients receiving treatment through the NGTS is managed through a nationally co-ordinated system known as the Data Reporting Framework (DRF), initiated in 2015. Treatment service providers collect data about their clients and their treatment through bespoke case management systems in line with the DRF. This data is then pseudonymised and uploaded to a centralised system. Data items collected and uploaded by the treatment providers are set out in the DRF Specification<sup>5</sup>, which is provided in the appendix to this report. Data are collected using four separate tables which provide details of client characteristics, gambling history, referrals and appointments. The DRF constitutes a co-ordinated core data set, collected to provide consistent and comparable reporting at a national level.

### 5 About this report

This report summarises information on the clients of NGTS agencies, providing details of their characteristics, gambling activities, gambling history, treatment receipt and outcomes. It is restricted to clients who attended at least one appointment for assessment or were in receipt of structured treatment within the reporting period and so does not represent all activity of the reporting agencies, nor does it capture any activity of agencies that do not report to the DRF system. It provides a consistently reported summary, comparable across years. The agencies reporting to the DRF for the year 2021/2022 are Gamcare, Gordon Moody, Central and North West London NHS Foundation Trust (London Problem Gambling Clinic) and NHS Northern Gambling Service.

<sup>5</sup> [https://www.begambleaware.org/sites/default/files/2021-11/DRF%20Specification\\_2.94.pdf](https://www.begambleaware.org/sites/default/files/2021-11/DRF%20Specification_2.94.pdf)

## 6 Notes on interpretation

Totals for services are summed to provide an estimate of national treatment levels. At the service level, client codes are used to distinguish one client from another without the need for identifiable information such as name and date of birth. If a client attends more than one service within the reporting period, they will be counted in each service they attended and therefore may be 'double counted' within the system. The total number presented in this report should therefore be interpreted as an estimate of the actual number of clients receiving treatment at participating agencies. The level of overlap between services can be estimated through the inclusion of a pseudonymised code, aligned to initials, date of birth and gender. In 2021/22, 119 (1.7%) clients were estimated to have been reported by more than one service provider.

Clients of gambling treatment services can either be people who experience problematic gambling behaviour themselves, people who are indirectly affected by another person's gambling (often termed 'affected others') or people who consider themselves at risk of developing problematic gambling behaviour. Within this report, we combine the second and third groups above so that clients are categorised as either 'people who gamble' or 'other clients'. Client characteristics and treatment engagement are presented for both client categories. Details of gambling activity and history are only presented for clients identified as people who gamble.

Within this report averages are presented either as means or medians, or sometimes both. As extreme individual values affect the mean but not the median, the median is often preferred.

To avoid drawing comparisons across measures with low numbers of responses, the tables in this report only compare across categories if there were at least 100 responses in the category (i.e. table row or column). The full list of categories is available in the data specification in appendix section 13.1.

The treatment period April 1<sup>st</sup> 2021 to March 31<sup>st</sup> 2022 coincided with the Covid-19 pandemic. During this period, rights of movement and access to public venues was sometimes restricted. Details of lockdowns and other restrictions across Great Britain can be found here:

- [England:](#)
- [Scotland:](#)
- [Wales:](#)

Within lockdown periods, access was restricted to services defined as essential. Hospitality and entertainment sector venues, such as pubs, restaurants and cinemas, but also betting shops, casinos and bingo premises were closed during lockdowns and subject to curfews and distancing restrictions outside of lockdowns.

## 7 About GambleAware

GambleAware<sup>6</sup> is the leading charity working to keep people safe from gambling harms. We do this by leading public health campaigns and commissioning the transformation of treatment, education and prevention services in Great Britain.

We work in close collaboration with the NHS, clinicians, local and national government, gambling treatment providers, as well as other services such as mental health, services for people who use drugs, alcohol and harm reduction services and criminal justice, to ensure that the whole system works together to help people suffering from gambling harms.

GambleAware has an extremely robust system of governance, and we are accountable to the Charity Commission. Our independent Board of trustees are leaders within the NHS and public health sector, and we work alongside DCMS, DHSC, OHID and the Gambling Commission and those with lived experience of gambling harm inform and guide our work.

We are also an approved National Institute for Health Research (NIHR) non-commercial partner. An effective mechanism to align the work of many organisations on the reduction of gambling harm as part of a coalition of expertise – the best way to ensure support reaches those who need it.

GambleAware is dedicated to understanding how to prevent the harm caused by gambling and do this by adopting a public health approach to prevent gambling. We deliver this by bringing together public sector and charity partners into a coalition of expertise to provide targeted, innovative, and effective services that help reduce gambling harm. Led by strategy and evidence, GambleAware is focused on evidence-based decision making to meet our vision and to bring together public and third sector expertise to create a prevention and treatment network.

Furthermore, GambleAware is guided by the framework for harm prevention, as set out in the National Strategy to Reduce Gambling Harms. As part of this, GambleAware made a commitment in its organisational strategy 2021–2026 to “improving the coherence, accessibility, diversity, and effectiveness of the National Gambling Treatment Service”. In line with this commitment, GambleAware developed a long-term commissioning strategy for the National Gambling Treatment Service (NGTS) in November 2021 to ensure that it effectively serves to reduce gambling harm across Great Britain. GambleAware’s Commissioning Intentions were published in September 2022. From 1 April 2023 there will be a refreshed helpline, more integrated regional services and increased support for residential treatment. These changes will enable the NGTS to respond to the growing needs of people at risk of gambling harm more effectively by enabling and supporting service providers to work closely with Local Authorities and local partners to deliver targeted support.

<sup>6</sup> Information about GambleAware and its governance is available at <https://about.gambleaware.org/about/>

## 8 Assessment of completeness of 2021/22 DRF data

Table 1 below shows the level of completion of details taken at the time of assessment for clients treated in 2021/22. Completion implies that the question was asked and details were recorded to the system, including where the answer was 'not stated' or 'not known'. Details of gambling activity and history are not routinely collected for clients who do not themselves gamble, so levels of completeness of gambling information relate only to clients identified as people who gamble. Most data items have high completion rates, helping to strengthen comparisons with previous years.

**Table 1 Level of completion of selected data fields**

| Data item                            | Level of completion |
|--------------------------------------|---------------------|
| Referral reason                      | 100%                |
| Referral source                      | 99.9%               |
| Gender                               | 99.4%               |
| Ethnicity                            | 98.1%               |
| Employment status                    | 97.6%               |
| Relationship status                  | 98.0%               |
| Religion                             | 43.0%               |
| Sexual orientation                   | 52.3%               |
| Care for children                    | 85.3%               |
| Local Authority of residence         | 96.6%               |
| Primary gambling activity*           | 95.8%               |
| Money spent on gambling (per month)* | 88.1%               |
| Job loss*                            | 99.6%               |
| Relationship loss*                   | 99.3%               |
| Early big win*                       | 99.3%               |
| Debt due to gambling*                | 96.7%               |

\* People who gamble only

## 9 Characteristics of Clients

A total of 7,072 individuals were reported as treated by NGTS providers in 2021/22. This includes 6,467 (91%) Residents of England, 222 (3%) of Scotland and 316 of Wales (4%), with 1% not known

Most of these clients were people who gamble (5,996; 85%), with 971 (14%) 'affected others'. A small number of referrals (105, 2%) related to clients who were not people who gamble but who considered themselves at risk of developing a gambling problem (see section 6).

One quarter (24%) of clients seen in 2021/22 were for recurring treatment (clients previously seen by the reporting service or another service).

### 9.1 Age and gender of Clients

Clients had a median age of 35 years at the point of referral, with three quarters (75%) aged 44 years or younger. The highest number of clients were reported in the 25–29 (18%) and 30–34 (21%) age bands (Table 2). Non-gambler clients had a higher median age of 40 years and were more likely than people who gamble to be in the over 45 age bands (Table 3).

A large majority of clients (70%) were male. This compares to 49% in the general population of Great Britain<sup>7</sup>. Thirty-one (0.4%) clients identified as a gender other than male or female (female to male, male to female transgender, or an unspecified gender category). The distribution of age differed by gender (Table 2 and Figure 1), with females being more evenly age distributed, including a greater proportion in all higher age groups (40+) compared to males. This resulted in a higher median age of 39 years for females compared to 34 years for males. Gender differed considerably by type of client (Table 4) with 79% of people who gamble being male compared to only 19% of other clients.

**Table 2 Age and gender of clients**

## 9.2 Ethnicity of Clients

Nearly nine tenths (88%) of clients were from a White ethnic background (Table 5), including 76% White British and 5% White Other. The next most reported ethnic backgrounds were Asian or Asian British (6%), Black or Black British (3%), and Mixed (3%). This compares to national (UK) proportions<sup>8</sup> of 87% White or White British, 7% Asian or Asian British, 3% Black or Black British and Mixed (3%).

Although no large differences existed between genders within categories defined by ethnicity (Table 6), a higher proportion of male clients were Asian or Asian British than female clients (7% compared to 4%) or Black or Black British (3% compared to 2%).

### 9.3 Relationship status of Clients

Most clients were in a relationship (36%) or married (27%). A further 30% were single, 4% were separated and 2% divorced (Table 7). Compared to male clients, female clients were less likely to be single (25% compared to 32%) and more likely to be married or in a civil partnership (32% compared to 24%) or widowed (2% compared to <1%) (Table 8).

## 9.4 Employment status of Clients

Most clients were employed (73%) (Table 9). People living with long-term disabilities/illness and not in work accounted for 11%, followed by unemployed (9%), looking after family/home and not working (3%), retired (2%) and student (2%). Female clients were less likely to be employed (62% compared to 76% males) (Table 10) and more likely to be looking after family/home and not working (7% compared to 1%), long-term sick/disabled & not in work (17% compared to 8%) or retired (5% compared to 1%).

## 9.7 Client religion

Introduced to data collection in April 2021, religion was specified for 43% of clients treated in 2021/22. A majority (59%) reported no religion, with a higher proportion among gambling clients (62%) than other clients (45%). A greater proportion of other clients than gambling clients were Christian (27% compared to 20%) or Muslim (13% compared to 4%). Other religions accounted for 11%, but details were not requested.

## 9.8 Gambling profile

Section 8.5 reports information collected only from clients who reported disordered gambling behaviour.

### 9.8.1 Gambling locations

Up to three gambling activities are recorded for each gambling client and these are ranked in order of significance (agreed between client and keyworker). Gambling activities are grouped within the locations in which they take place. Forty eight percent of people who gamble reported one gambling activity, 29% reported two and 19% reported three.

The most common gambling location reported (Table 14) was online, used by 75% of people who gamble who provided this information. Bookmakers were the next most common, used by 30% of people who gamble. No other locations were used by more than 10% of people who gamble, although casinos were used by 7% and miscellaneous (such as lottery, scratch-cards and football pools) by 9%.

Table 14 also shows the location of main gambling activity, within which online services are the most common, followed by bookmakers. These two locations account for the majority of main gambling activities, at 87%.

Table 14 Location of gambling activity reported in 2021/22

|  | Any gambling in this location | %     | Main gambling location | %     |

\* %s may add up to > 100% because more than one activity can be reported

Within online services, casino slots were the most reported individual activity, reported by 38% of people who gamble overall, followed by sporting events (20%) and casino table games (12%). Within bookmakers, gaming machines were the most common form of gambling, used by 17% of people who gamble, followed by sporting events (10%) and horses (7%).

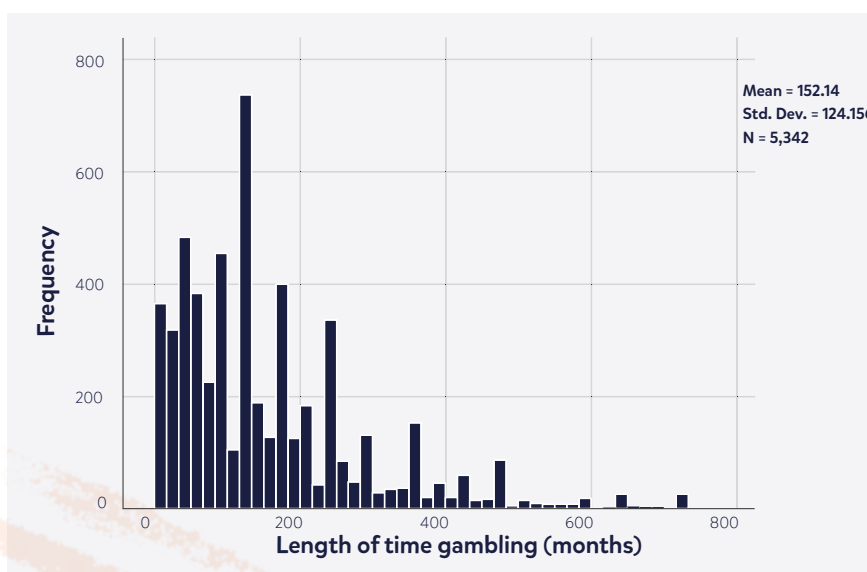

### 9.8.3 Gambling history

The median age of onset of problem gambling was 24 years, although this was highly variable. One quarter reported problem gambling starting by the age of 18 years and three quarters by age 32. At the point of presentation to gambling services, a median of 10 years of gambling was reported. Again, this was highly variable. One quarter reported problem gambling for up to 5 years and three quarters for up to 19 years. Figure 2 and Figure 3 show the distributions of age of onset and length of time gambling. Spikes in these distributions are likely to represent the rounding of answers (to five-year age brackets and number of years' gambling).

**Figure 2 Distribution of age of onset of gambling**

**Figure 3 Distribution of length of time gambling prior to presentation**

The DRF contains a number of measures of detrimental outcomes of gambling, some of which are not presented here in table form but summarised as follows. A majority of people who gamble (62%) had experienced an early big win in their gambling career. Job loss (because of gambling) was reported by 11% and relationship loss by 26%.

Nearly four in ten people who gamble (37%) had no debt due to gambling at the time of assessment (Table 16). 23% had debts under £5,000 and 31% had debts of £5,000 or more. A further 2% were bankrupt or in an Individual Voluntary Arrangement (IVA) and 5% did not know the size of their debts.

**Table 16 Debt due to gambling**

|  | N    | %     |
|--|------|-------|
| <b>No debt</b>                         | 2094 | 37.3% |
| <b>Under £5000</b>                     | 1308 | 23.3% |
| <b>£5000-£9,999</b>                    | 575  | 10.2% |
| <b>£10,000-£14,999</b>                 | 354  | 6.3%  |
| <b>£15,000-£19,999</b>                 | 247  | 4.4%  |
| <b>£20,000-£29,999</b>                 | 206  | 3.7%  |
| <b>£30,000 - £49,999</b>               | 152  | 2.7%  |
| <b>£50,000 - £99,999</b>               | 123  | 2.2%  |
| <b>£20,000-£99,999 (not specified)</b> | 124  | 2.2%  |
| <b>£100,000 or more</b>                | 53   | 0.9%  |
| <b>Bankruptcy</b>                      | 22   | 0.4%  |
| <b>In an IVA</b>                       | 78   | 1.4%  |
| <b>Don't know (some)</b>               | 276  | 4.9%  |
| <b>Total</b>                           | 5612 |       |
| <b>Missing/not stated</b>              | 384  |       |
| <b>Total people who gamble</b>         | 5996 |       |

A greater proportion of those reporting job loss relationship through gambling (Table 17) reported using bookmakers (46% compared to 27% with no job loss) and casinos (12% compared to 8%), whereas a greater proportion of those reporting no job loss through gambling reported using online services (77% compared to 65% of those not job loss). Similarly (Table 18), a greater proportion of those reporting a loss of relationship through gambling (40% compared to 26% of those not reporting loss) reported using bookmakers, whereas a greater proportion of those reporting no loss of relationship through gambling reported using online services (78% compared to 70% of those who did report a loss).

#### 9.8.4 Money spent on gambling

People who gamble reported gambling on a median of 15 days in the last 30 and spending a median of £120 per day that they gambled in the previous 30 days before assessment. The mean value of £511 per day demonstrates that some people who gamble spent at considerably higher levels. Almost half spent up to £100 per gambling day in the previous 30 days before assessment (Table 19), 15% spent between £100 and £200, 21% spent between £200 and £500 and 14% spent over £500.

Table 19 Average spend on gambling days

|                                | N    | %     |
|--------------------------------|------|-------|
| <b>Up to £100</b>              | 2349 | 49.8% |
| <b>Up to £200</b>              | 725  | 15.4% |
| <b>Up to £300</b>              | 377  | 8.0%  |
| <b>Up to £400</b>              | 149  | 3.2%  |
| <b>Up to £500</b>              | 453  | 9.6%  |
| <b>Up to £1000</b>             | 396  | 8.4%  |

| <b>Total people who gamble</b> | 5996 |       |

Figure 4 Distribution of average daily spend on gambling (capped at £10k)

In the preceding month, people who gamble reported spending a median of £1000 and a mean of £2,288 on gambling. 63% of people who gamble spent up to £1,000 in the preceding month (Table 20). 17% reported spending over £2000 in the preceding month.

**Table 20 Reported spend on gambling in month preceding treatment**

|                                | N    | %     |
|--------------------------------|------|-------|
| <b>Up to £100</b>              | 388  | 7.3%  |
| <b>Up to £200</b>              | 254  | 4.8%  |
| <b>Up to £300</b>              | 300  | 5.7%  |
| <b>Up to £400</b>              | 281  | 5.3%  |
| <b>Up to £500</b>              | 564  | 10.7% |
| <b>Up to £1000</b>             | 1567 | 29.7% |
| <b>Up to £2000</b>             | 1060 | 20.1% |
| <b>Over £2000</b>              | 870  | 16.5% |
| <b>Total</b>                   | 5284 |       |
| <b>Missing</b>                 | 102  |       |
| <b>Total people who gamble</b> | 5996 |       |

Mean values and the range of spend differed considerably between those reporting different gambling locations (Table 21), although that spend cannot be attributed specifically to gambling in those locations. Mean value of spend on gambling days was highest among those using live events and then casinos. These means can be affected by outliers (extreme individual values) but the median values were also relatively high for casinos (£200). The median value was highest among users of casinos and adult entertainment centres (18+ arcades) (£200) and then bookmakers and private members clubs (£150). Average monthly spend was particularly elevated among those using casinos and live events, but also among those using online services and bookmakers, more so than seen for average daily spend, suggesting that frequent use of these services may contribute to a high monthly spend.

**Table 21 Money spent on average gambling days and in the past month, by people who gamble reporting each gambling location.**

|  | Average spend per gambling day (£) |        | Spend in past month (£) |        |

### 9.8.5 Gambling type by age

Table 22 shows that use of bookmakers, bingo premises, adult entertainment centres (18+ arcades) and pubs was more commonly reported by those in older age categories, whereas use of online services is clearly related to age, being more popular among younger age bands.

**Table 22 Gambling locations by age group**

|  | Age bands* |       |       |       |       |       |       |       |       |

Note: %s may total > 100% as more than one location can be reported.

### 9.8.6 Gambling location by gender

A lower proportion of women who gamble reported using bookmakers (10% compared to 36% males who gamble), casinos (6% compared to 9%) or live events (0.3% compared to 2%), whereas a higher proportion reported using bingo premises (6% compared to 1%), adult entertainment centres (18+ arcades) (6% compared to 3%), family entertainment centres (2% compared to 1%), online services (82% compared to 73%) or miscellaneous activities (12% compared to 6%).

Table 23 Gambling location by gender

| <b>Other</b>                                   | 17   | 0.4%  | 6      | 0.5%  |
| <b>Total people who gamble*</b>                | 4492 |       | 1195   |       |

\*Categories of gender with less than 100 people who gamble were excluded from this table. See section 13.1.1.1 for available categories. Note: %s may total > 100% as more than one location can be reported.

### 9.8.7 Gambling location by ethnic group

Some considerable differences were evident between the gambling locations reported by different ethnic groups (Table 24). Compared to White or White British people who gamble: a higher proportion of people who gamble who identified as Black or Black British reported using bookmakers (44% compared to 30%) or casinos (17% compared to 7%); a higher proportion of those who identified as Asian or Asian British also reported using bookmakers (34%) or casinos (20%). Use of bookmakers was highest among those who identified as Black or Black British (44%), whereas use of bingo premises (1%), live events (1%), family entertainment centres (0%) or pubs (0%) was lowest. Use of casinos was highest among those identifying as Asian or Asian British (20%), whereas use of online services was lowest (61%) compared to other ethnic groups.

Table 24 Gambling location by ethnic group

|  | White or White British |       | Black or Black British |       | Asian or Asian British |       | Mixed |       |

### 9.8.8 Gambling type by relationship status

Compared to those in a relationship, a greater proportion of people who gamble defined as not in a relationship (divorced, separated or single) reported using bookmakers (35% compared to 28%), bingo premises (3% compared to 1%), casinos (10% compared to 7%), and adult entertainment centres (18+ arcades) (5% compared to 3%), family entertainment centres (2% compared to 1%), pubs (3% compared to 2%) and miscellaneous (9% compared to 6%) (Table 25). A greater proportion of those in a relationship or married/ in a civil partnership reported using online services (79% compared to 69%).

### 9.8.9 Gambling type by employment status

Use of bingo premises (5%), casinos (12%), adult entertainment centres (18+ arcades) (9%) and miscellaneous activities (14%) was higher among those defined as long-term living with a disability or sickness & not in work than among those who were employed (Table 26), with use of online services the lowest (66%). Use of online services (77%) was higher among those employed than the unemployed.

## 9.9 Use of self-exclusion tools

Introduced to data collection in April 2021, use of self-exclusion tools was specified for 73% of people who gamble treated in 2021/22. Self-exclusion tools can be used by individuals to place limits on their gambling activity. Self-exclusion involves an individual requesting that a gambling operator excludes them from gambling with them for a set amount of time by for example blocking their online account or denying service at a bookmaker. Where specified, 74% used a tool, with 12% stating that they had the ability to circumvent these.

Table 27 Use of self-exclusion tools

|  | N    | %      |
|--|------|--------|
| <b>Yes</b>                                 | 2673 | 61.3%  |
| <b>Yes, but have ability to circumvent</b> | 534  | 12.2%  |
| <b>No</b>                                  | 1156 | 26.5%  |

| <b>Total people who gamble</b>             | 5996 |        |

## 10 Access to services

### 10.1 Source of referral into treatment

Most referrals were from the national gambling helpline (57%) or self-made (26%). The national gambling helpline was only introduced as a recorded source of referral in April 2021 and is likely to have been subsumed within 'self-referral' before this as self-referral accounted for 93% of clients in 2020/21. The GamCare/partner network accounted for a further 8% of referrals. Independent health sector mental health services, other primary health care and other services or agencies accounted for 6% of referrals between them (Table 28). Other sources accounted for less than 1% of referrals each. Source of referral was broadly comparable between people who gamble and other clients, a greater proportion of other clients attended via the gambling helpline or self-referral.

Table 28 Referral source for clients treated in 2021/22, by type of client

|  | Gambling clients |        | Other clients |        | Total |        |
|--|------------------|--------|---------------|--------|-------|--------|

## 10.2 Where heard of service

Introduced to data collection in April 2021, where clients heard of the service is recorded for self-referred clients only. Sources other than those specified accounted for 36% of cases, internet searches for 30%, GamCare website for 14% and family or friend for 10%. No clients reported hearing of the service via newspaper or radio and very few from TV, social media or the GambleAware website.

**Table 29 Where heard of service**

## 10.3 Waiting times for first appointment

Waiting time was calculated as the time between referral date and date of first recorded appointment. For clients treated during 2021/22, 50% had an appointment within five days and 75% within twelve days. Waiting times for residential services were higher, with 50% of clients seen within six weeks.

## 11 Engagement

A total of 55,853 appointments were recorded for clients treated in 2021/22 (Table 30). This represents a median of seven appointments per client, identical for both people who gamble and other clients.

**Figure 6 Distribution of number of appointments recorded**

Most of these appointments (79%) were for the purpose of treatment, with 18% being for assessment.

**Table 30 Appointment purpose for clients treated in 2021/22**

|  | Gambling clients |        | Other clients |        | Total |        |

In a clear reflection of pandemic conditions, most (90%) appointments were conducted remotely by telephone (77%) web camera (13%) or other remote platform (1%) with only 8% conducted on a face-to-face basis (and 1% 'other'). This marks an increase in remote appointment even in comparison to 2020/21.

New 'appointment type' categories were introduced in April 2021 (CBT (Cognitive Behavioural Therapy), Structured psycho-social, 5 Step, Psychodynamic therapy, Pharmacological, Motivational Interviewing, DBT (Dialectical behaviour therapy), ACT (Acceptance and commitment therapy), EMDR (Eye movement desensitisation and reprocessing)). Most appointments (58%) are now described as 'structured psycho-social'. A further 19% were for CBT (Cognitive Behavioural Therapy) and 12% for motivational interviewing (Table 31). Previously, most appointments (97% in 2020/21) were defined as counselling activity.

**Table 31 Interventions received at appointments in 2021/22**

## 11.1 Length of time in treatment

Among those receiving and ending treatment within 2021/22, treatment lasted for a median of ten weeks. One quarter of clients received treatment for five weeks or less, half received treatment for between six and 16 weeks and one quarter received treatment for over 16 weeks. Treatment for clients other than people who gamble was shorter, with a median of 9 weeks compared to 10 weeks for people who gamble. Treatment in residential centres was generally longer, lasting a median of 20 weeks.

**Figure 7 Distribution of number of weeks in treatment**

## 12 Treatment Outcomes

Among clients treated within 2021/22, 1,895 (27%) were still in treatment at the end of March 2022 whereas 5,177 (73%) exited treatment before the end of March 2022. Treatment outcomes are presented for those clients who were discharged between April 2021 and March 2022 to represent their status at the end of treatment.

### 12.1 Treatment exit reasons

Most clients (63%) who exited treatment within 2021/22 completed their scheduled treatment. However, 30% dropped out of treatment before a scheduled endpoint. Much smaller proportions were referred on to another service following treatment (6%) or discharged or referred on following assessment, without receiving treatment (1%). Clients other than people who gamble were more likely to complete treatment (76% compared to 60%) and less likely to drop out (21% compared to 31%).

Table 32 Reasons for treatment exit for clients treated within 2021/22

|   | Gambling clients |       | Other clients |       | Total |       |
|---|------------------|-------|---------------|-------|-------|-------|

Some minor differences in exit reason were noted between male and female clients, with a greater proportion of female clients dropping out of treatment (26% compared to 31% males). However, when restricting to gambling clients, an equal proportion of male and female clients dropped out of treatment.

A greater proportion of those who were unemployed (36%) dropped out of treatment (Table 33), whereas those who were employed were the most likely to complete treatment (64%). Levels of drop out decreased with age, falling from 36% among those under 30 years old to 21% among those over 50 years old. Rates of completion were higher among those in a relationship (64% compared to 58% not in a relationship) and among females (66% compared to 61% in males).

Among gambling clients, exit reasons differed according to primary gambling activity. Treatment completion was achieved by 62% of those citing online services compared to 53% of those citing bookmakers.

## 12.2 Severity scores

Two measures of severity are routinely recorded within appointments; the Problem Gambling Severity Index (PGSI), which is recorded for people who gamble only, and the CORE-10 score, which is recorded for all clients. Clients are asked directly for their responses.

### PGSI

The PGSI is a validated and widely used tool<sup>9</sup> designed to assess an individual's level of gambling related risk behaviour. The PGSI consists of nine items, each of which are scored on a four-point scale (0, 1, 2, or 3) and summed to give a total score of between zero and 27 points (see appendix, 13.2 for further details).

A PGSI score of eight or more is used to classify an individual as having problematic gambling behaviour, defined by the scale as a 'problem gambler'. Scores between three and seven represent individuals classified as being a 'moderate risk gambler' by the scale (those who experience a moderate level of problems leading to some negative consequences). A score of one or two represents individuals classified by the scale as undertaking low risk gambling (those who experience a low level of problems with few or no identified negative consequences). Therefore, anyone scoring one or more on the scale is experiencing some level of difficulty or problem. A score of zero represents a person with no identified gambling problems, harms, or consequences.

### CORE-10

The Core-10 is a 10-item questionnaire designed to measure distress, including commonly experienced symptoms of anxiety and depression and associated aspects of life and social

<sup>9</sup> PGSI is a validated population level screening tool. It should be noted that the PGSI was not designed as a clinical tool, nor as an outcome measure for treatment. PGSI cannot be directly interpreted as a benchmark of treatment effectiveness, as longer-term outcomes are not captured. It additionally does not weight harms; it is a proxy measure of harm. Moreover, it is argued to use stigmatising language and terminology in its categorisation of various levels of experienced gambling harm. However, in the absence of a widely agreed clinical measure, the PGSI provides an internationally recognised indicator of gambling harm.

functioning<sup>10 11</sup>. The Core-10 has 10 items, which include Anxiety (2 items), depression (2 items), trauma (1 item), physical problems (1 item), functioning (3 items – day to day, close relationships, social relationships) and risk to self (1 item). The Core-10 items are individually scored on a five-point scale (0, 1, 2, 3 or 4) and summed to give a total score of 40 (see appendix, 13.3 for further details).

A Core-10 score of 25 and above is used to classify an individual as having severe psychological distress, a score of 21 to 25 as moderate to severe distress, a score of 16 to 20 as moderate distress, a score of 11 to 15 as mild distress, and a score of 0 to 10 classifies an individual as being below the clinical cut off for psychological distress.

### 12.2.1 Baseline and latest severity scores

At the earliest PGSI assessment for people who gamble treated during 2021/22, PGSI scores were recorded for 94% distribution of scores shown in Figure 8). Among these (Table 35), the majority (90%) recorded a PGSI score of 8 or more. Much smaller proportions were defined as moderate risk (7%), low risk (1%) or no problem (2%). Among those in the highest PGSI category (8+), mean PGSI score was 19, considerably higher than the minimum of eight for this category.

**Table 35 PGSI category of severity at earliest PGSI assessment, all people who gamble**

|                                | Earliest PGSI assessment |        |            |

**Figure 8 Distribution of PGSI score at earliest PGSI assessment**

<sup>10</sup> CORE-10 USER MANUAL Version 1.0 Released 1st June 2007.

<sup>11</sup> The CORE-10: A short measure of psychological distress for routine use in the psychological therapies <https://onlinelibrary.wiley.com/doi/abs/10.1080/14733145.2012.729069>

At the latest score taken (Table 36), a smaller proportion of clients (28%) still had a PGSI score of 8+. Around three in ten people who gamble (28%) were now defined as having no gambling related risk behaviour, with the remainder defined as at either low (22%) or moderate (22%) risk of gambling related risk behaviour.

**Table 36 PGSI category of severity at earliest and latest PGSI assessment, people who gamble exiting treatment**

|                                | Earliest PGSI assessment |        |            | Latest PGSI assessment |        |            |

| <b>Total</b>                   | 4333                     | 100.0% |            | 4333                   | 100.0% |            |
| <b>Missing</b>                 | 43                       |        |            | 43                     |        |            |
| <b>Total people who gamble</b> | 4376                     |        |            | 4376                   |        |            |

Approximately 70% of those with a PGSI score of 8+ at earliest measure no longer recorded a score of 8+ at the latest, with 26% now being defined as 'no problem'. For those completing treatment, 87% no longer recorded a score of 8+ at this stage, with 37% being defined as 'no problem'. Figure 9 shows how clients PGSI category changed from earliest to latest recorded PGSI assessment.

**Figure 9 Earliest PGSI status mapped to latest PGSI status (n=4333)**

## CORE-10

At the earliest known appointment for clients treated during 2021/22, CORE-10 scores were recorded for 86% of clients (distribution of score shown in Figure 10). Among these clients, scores were evenly distributed across the categories of severity (Table 36) with around one fifth of clients scoring as severe (17%), moderate-to-severe (18%), moderate (22%) or mild (19%) and 24% scoring below clinical cut-off. A greater proportion of people who gamble recorded a score of severe than other clients (19% compared to 9%). Within the category of severe, mean scores were 30 for people who gamble and 29 for other clients.

**Table 37 CORE-10 category of severity at earliest appointment**

|                               | Gambling clients |        | Other clients |        | Total |        |
|-------------------------------|------------------|--------|---------------|--------|-------|--------|

## 12.2.2 Change in severity scores

As scores for PGSI and CORE-10 are recorded periodically, it is possible to report on changes to these scores during treatment. Change scores are reported here in three ways: level of change in scores, direction of change in scores, and changes between categories of severity. Changes are reported only between the earliest and latest scores recorded within a client's latest episode of treatment. Therefore, if a client has received multiple episodes of treatment (from one or more providers), scores may not be reflective of the cumulative change over their entire treatment history.

### 12.2.2.1 PGSI

Between earliest and latest PGSI scores, clients saw a median reduction (improvement) of 12 points on the PGSI scale.

Table 38 summarises the direction and extent of change in PGSI scores with the majority (80%) improving, 18% showing no change and a small minority (3%) recording a higher score at latest appointment compared to earliest scores. The greatest proportion of clients (36%) improved by 10–19 points, with a further quarter (25%) improving by 20–27 points<sup>12</sup>.

Table 39 shows these changes in PGSI score by discharge reason. A greater proportion of those that did not complete treatment recorded no change in score (34% for dropped out compared to 6% for completed). For those who completed scheduled treatment, improved scores were recorded for most (92%). Level of change also differed by discharge reason with a median of 15 points for those completing treatment, compared to seven for those dropping out before completion.

**Table 39 Changes in PGSI score between earliest and latest appointments**

|                                   | N           | %             |
|-----------------------------------|-------------|---------------|
| <b>Improved by 20- 27 points</b>  | 1071        | 24.7%         |

| <b>Treated - Completed scheduled treatment</b>                                | 51    | 1.9% | 156       | 5.9%  | 2419   | 92.1% |
| <b>Treated - Dropped out of treatment (unscheduled discontinuation)</b>       | 54    | 4.1% | 455       | 34.1% | 824    | 61.8% |
| <b>Treated - Referred to other service</b>                                    | 13    | 4.7% | 114       | 41.5% | 148    | 53.8% |
| <b>Assessed - Not Known</b>   | 0     | 0.0% | 6         | 75.0% | 2      | 25.0% |
| <b>Treated - Not Known</b>  | 1     | 2.1% | 13        | 27.1% | 34     | 70.8% |

## CORE-10

Between earliest and latest CORE-10 assessment within treatment where CORE-10 scores were recorded, client's scores decreased (improved) by a median of 7 points on the CORE-10 scale (8 points for people who gamble and 6 points for clients other than people who gamble).

Table 40 summarises the direction and extent of change in CORE-10 scores. Most clients (74%) saw a reduction during treatment, 17% showed no change and a minority (9%) saw an increase in Core-10 score. Most clients (64%) recorded an improvement of between 1 and 20 points. The most common improvement (1-10 points) was achieved by 37%. A greater proportion of people who gamble improved by more than 20 points (11% compared to 5% other clients)<sup>13</sup>.

Table 41 shows these changes in CORE-10 score by discharge reason. Lack of change in score was much more likely in those that did not complete treatment (36% for dropped out compared to 7% for completed). For those who completed scheduled treatment, improved scores were recorded for most (86%).

<sup>13</sup> These categories group level of change evenly across possible values and do not represent formal severity categories.

Table 41 Direction of change in CORE-10 score between earliest and latest appointments

|                                  | Gambling clients |        | Other clients |        | Total |        |

## 13 Trends

### 13.1 Trends in numbers in treatment

Table 43 and Figure 13 show how the number of clients treated each year has varied since 2015/16, with the greatest number of clients treated in 2019/20. Between 2020/21 and 2021/22 there was a 17% reduction in clients treated.

The number of individuals referred each year (including those that do not result in treatment) has varied since 2015/16, with the greatest number of clients referred in 2019/20. Between 2020/21 and 2021/22 there was an 18% reduction in referrals.

**Table 43 Trends in number of clients referred and treated per year – 2015/16 to 2021/22**

|                             | 2015/16 | 2016/17 | 2017/18 | 2018/19 | 2019/20 | 2020/21 | 2021/22 |

### 13.2 Trends in gambling type

The most notable difference in reported gambling locations (based on three main activities) between 2015/16 and 2021/22 (Table 44) has been the increase in the proportion of clients reporting using online gambling services (rising from 57% to 75%) alongside the reduction in the proportion using bookmakers (falling from 56% to 31%). Data for 2021/22 show a general increase in use of 'in person' venues compared to the low values recorded in 2020/21. Covid-19 conditions, including periodic lockdowns may have affected reports for 2020/21 and 2021/22.

Table 45 Trends in gambling locations – 2015/16 to 2021/22

Table 45 provides trends in common activities within the three most used gambling locations (bookmakers, casinos and online only). Within online activity, casino slots have increased (by six

percentage points in 2021/22) whereas poker has gradually decreased. Casino table games decreased sharply in 2021/22. Casino slot reports represented an increase of six percentage points over the previous year.

| <b>Other client</b> | <b>Male</b>   | 116     | 20.3% | 133     | 17.7% | 120     | 14.9% | 142     | 16.5% | 403     | 29.0% | 171     | 13.5% | 199     | 18.8% |
|                     | <b>Female</b> | 456     | 79.7% | 618     | 82.3% | 685     | 85.1% | 716     | 83.4% | 989     | 71.0% | 1092    | 86.3% | 862     | 81.2% |

Table 52 shows that the proportion of White or White British clients has reduced slightly between 2015/16 (91%) and 2021/22 (88%). This is due to a greater increase in clients from ethnic minorities accessing the service; while the number of clients has increased for all groups except for "Other" ethnicity, this has been greater for clients from ethnic minority groups.

Table 52 Trends in ethnicity – 2015/16 to 2021/22

|                               | 2015/16 |       | 2016/17 |       | 2017/18 |       | 2018/19 |       | 2019/20 |       | 2020/21 |       | 2021/22 |       |

##### 14.1.1.1 Person Table Codes

| P-A Gender   | Type of change  | Detail of change  | Rationale  |
|--|-----------------|---|--|
| 0 Not known  |                 | Response options have been amended to reflect diversity of gender identities. | Protected characteristic. Amends reflect Stonewall's guidance. |
| 1 Male   |                 |   |  |
| 2 Female   |                 |   |  |
| 3 <del>Transgender</del>                                       | Delete response |   |  |
| 4 Female-to male (FTM)/ Transgender Male/Trans Man             | New             |   |  |
| 5 Male-to-Female/Transgender Female/Trans Woman                | New             |   |  |
| 6 Genderqueer, neither exclusively male nor female             | New             |   |  |
| 7 Additional Gender Category/ (or Other), please specify       | New             |   |  |
| 9 Not stated (person asked but declined to provide a response) | New             |   |  |

**P-F Sex:** This item relates to patient stated sex assigned at birth, i.e. client to be asked "What sex were you assigned at birth on your original birth certificate?".

| P-F Sex |  | Type of change | Detail of change                                  | Rationale  |
|---------|--|----------------|---|--|
| 1       | Male   | New field      | Additional field to collect sex assigned at birth | Protected characteristic. Amends reflect Stonewall's guidance. |
| 2       | Female   |                |   |  |
| 9       | Not stated (person asked but declined to provide a response) |                |   |  |

**P-B Employment Status:** This item relates to the employment status of the client. In the event that multiple descriptors apply, the response which best describes what they are mainly doing should Vbe selected.

| P-B Employment Status |  | Type of change | Detail of change  | Rationale  |
|-----------------------|--|----------------|---|--|
| 1                     | Employed   |                |   |  |
| 2                     | Unemployed and Seeking Work  |                |   |  |
| 3                     | Students who are undertaking full (at least 16 hours per week) or part-time (less than 16 hours per week) education or training and who are not working or actively seeking work |                |   |  |
| 4                     | Long-term sick or disabled and not in work   | Amend          | Previous version specified names of Government support client may be receiving – removed and clarification added that client is not in work | Specification of benefits/support received not important – clarification of working status of greater importance   |
| 5                     | Looking after the family or home and not working or actively seeking work  | Amend          | Removed reference to "homemaker"  | Updated to remove infrequently used term   |
| 6                     | Not receiving benefits and who are not working or actively seeking work  |                |   |  |
| 12                    | In prison  | New            | Replaced code 7 with codes 11 and 12 (Removed references to "in care" and separated out "seeking asylum" from "in prison")                  | Treatment programmes in prisons are being initiated/ underway so monitoring this as a standalone category will become more important over time.<br><br>"In care" is not an employment status |
| 11                    | Seeking asylum   | New            | Split out from code 7   | Need to differentiate in analysis  |
| 8                     | Unpaid voluntary work who are not working or actively seeking work   |                |   |  |
| 9                     | Retired  |                |   |  |
| 10                    | Not Stated (Person asked but declined to provide a response)   |                |   |  |

**P-C Relationship Status:** This item relates to the client's relationship status as an indicator of social support.

| <b>P-C Relationship Status</b> |  |
|--------------------------------|--|
| 0                              | Not known  |
| 1                              | Divorced/Dissolved Civil Partnership                         |
| 2                              | Separated  |
| 3                              | Single   |
| 4                              | Widowed  |
| 5                              | In a relationship  |
| 6                              | Married/Civil partnership                                    |
| 9                              | Not Stated (Person asked but declined to provide a response) |

**P-D Ethnic background:** This item relates to the ethnicity of the client and is a mandatory field.

| <b>P-D Ethnic background</b> | <b>Type of change</b> | <b>Detail of change</b> | <b>Rationale</b>   |
|------------------------------|-----------------------|-------------------------|--|
| 1                            |                       |                         |  |
| 2                            |                       |                         |  |
| 3                            |                       |                         |  |
| 4                            |                       |                         |  |
| 5                            |                       |                         |  |
| 6                            |                       |                         |  |
| 7                            |                       |                         |  |
| 8                            |                       |                         |  |
| 9                            |                       |                         |  |
| 10                           |                       |                         |  |
| 11                           |                       |                         |  |
| 12                           |                       |                         |  |
| 13                           |                       |                         |  |
| 14                           |                       |                         |  |
| 15                           |                       |                         |  |
| 16                           |                       |                         |  |
| 17                           |                       |                         |  |
| 99                           | New                   | Additional code added   | To ensure completeness of data a non-response option is needed |

**P-E Additional client diagnosis:** This field relates to additional health conditions a client may have. Only professionally diagnosed, long term health conditions should be considered.

| <b>P-E Additional client diagnosis</b>                         | <b>Type of change</b> | <b>Detail of change</b>  | <b>Rationale</b>   |
|--|-----------------------|--|--|
| 0 Not stated (Person asked but declined to provide a response) |                       |  |  |
| 1 Psychological  | Delete                |  |  |
| 2 Pharmacological  | Delete                |  |  |
| 3 Yes – Physical   | New                   | Categories changed from psychological and pharmacological to physical and mental | Previous categories were treatment types, not diagnoses – mental and physical are standard categories for understanding other co-occurring health conditions |
| 4 Yes - Mental   | New                   |  |  |
| 5 Yes – Both physical and mental                               | Amended               |  |  |
| 6 No   |                       |  |  |

**P-G Sexual Orientation:** Client to be asked “Do you think of yourself as...?”

| <b>P-E Sexual Orientation</b>                                  | <b>Type of change</b> | <b>Detail of change</b>                | <b>Rationale</b>  |
|--|-----------------------|--|---|
| 1 Lesbian, gay or homosexual                                   | New                   | New response options for new data item | Protected characteristic. In line with Stonewall's recommended wording. |
| 2 Straight or heterosexual                                     |                       |  |   |
| 3 Bisexual   |                       |  |   |
| 4 Something else (please specify)                              |                       |  |   |
| 9 Not stated (Person asked but declined to provide a response) |                       |  |   |

**P-H Children:** Record whether client is responsible for the care a of a child/children aged under 18

| <b>P-H Children</b>  | <b>Type of change</b> | <b>Detail of change</b>                | <b>Rationale</b>  |
|--|-----------------------|--|---|
| 1 Yes  | New                   | New response options for new data item | Protected characteristic. In line with Stonewall's recommended wording. |
| 2 No   |                       |  |   |
| 9 Not stated (Person asked but declined to provide a response) |                       |  |   |

**P-I Religious affiliation:** Record whether client consider themselves to have religious affiliation to any of the below groups. This is a connection or identification with a religion irrespective of actual practice or belief, so clients may consider their upbringing to be relevant even if not practicing at present.

| <b>P-I</b>   | <b>Type of change</b> | <b>Detail of change</b>   | <b>Rationale</b>   |
|--|-----------------------|---|--|
| 1 No religion  | New                   | Note that client does not need to be actively practicing to consider themselves affiliated with a religion. | This is a protected characteristic so needs to be monitored for equity of service provision. |
| 2 Christian  |                       |   |  |
| 3 Buddhist   |                       |   |  |
| 4 Hindu  |                       |   |  |
| 5 Jewish   |                       |   |  |
| 6 Muslim   |                       |   |  |
| 7 Sikh   |                       |   |  |
| 8 Other religion   |                       |   |  |
| 9 Not stated (Person asked but declined to provide a response) |                       |   |  |

## 14.1.2 Gambling History Table

| Data Item Code | Data Item  | Input Code Table | Name   | Format    | Example |
|----------------|--|------------------|--------|-----------|---------|
| X0             | Care Plan Number                                     |                  | X0     | N25       |         |
| X1             | Local Client Identifier                              | -                | X1     | N25       |         |
| X2             | Provider code  | -                | X2     | A10       |         |
| G-A A1         | Bookmakers - horses                                  | G-A              | G-A A1 | N2 (1-10) |         |
| G-A A2         | Bookmakers - dogs                                    | G-A              | G-A A2 | N2 (1-10) |         |
| G-A A3         | Bookmakers - Sports or other event                   | G-A              | G-A A3 | N2 (1-10) |         |
| G-A A4         | Bookmakers - Gaming Machines (FOBT)                  | G-A              | G-A A4 | N2 (1-10) |         |
| G-A A5         | Bookmakers - Gaming Machine (Other)                  | G-A              | G-A A5 | N2 (1-10) |         |
| G-A A6         | Bookmakers - Other                                   | G-A              | G-A A6 | N2 (1-10) |         |
| G-A B1         | Bingo Premises - Live draw                           | G-A              | G-A B1 | N2 (1-10) |         |
| G-A B2         | Bingo Premises - Terminal                            | G-A              | G-A B2 | N2 (1-10) |         |
| G-A B3         | Bingo Premises - Skill Machine                       | G-A              | G-A B3 | N2 (1-10) |         |
| G-A B4         | Bingo Premises - Gaming Machines (other)             | G-A              | G-A B4 | N2 (1-10) |         |
| G-A B5         | Bingo Premises - Other                               | G-A              | G-A B5 | N2 (1-10) |         |
| G-A C1         | Casino - Poker                                       | G-A              | G-A C1 | N2 (1-10) |         |
| G-A C2         | Casino - Other card games                            | G-A              | G-A C2 | N2 (1-10) |         |
| G-A C3         | Casino - Roulette                                    | G-A              | G-A C3 | N2 (1-10) |         |
| G-A C4         | Casino - Gaming Machines (FOBT)                      | G-A              | G-A C4 | N2 (1-10) |         |
| G-A C5         | Casino - Gaming Machine (Other)                      | G-A              | G-A C5 | N2 (1-10) |         |
| G-A C6         | Casino - Other                                       | G-A              | G-A C6 | N2 (1-10) |         |

**G-F Time spent gambling – last 30 days:** How many days in the last 30 would you say you have gambled? Include option for “not stated/don't know”

**G-G Time spent gambling – daily average over the last 30 days:** How long do you spend on average gambling on a gambling day? Time to be input in hours (not minutes). Time should be spent on gambling activities, not rumination about gambling. Include option for “not stated/don’t know”

**G-H Money spent gambling – daily average over the last 30 days:** How much money do you spend on average on a typical gambling day? Include option for “not stated/don’t know”

**G-I Money spent per month:** How much do you spend in a month on gambling (total gambling expenditure minus total gambling wins)? Include option for “not stated/don’t know”

**G-J Use of self-exclusion tools at point of assessment:** Record whether at the point of assessment the client is using any self-exclusion tools (this could be schemes such as GamStop, blocking software, or bank transaction blocking). Check whether client has methods of circumventing exclusion for the restriction put in place (e.g. if still online gambling despite registering with GamStop).

**R-C Referral reason**

| <b>R-C Referral reason</b> |   |
|----------------------------|---|
| 1                          | Problem gambler                               |
| 2                          | Affected other                                |
| 3                          | Person at risk of developing gambling problem |

**R-D Previous treatment for gambling:** This field should be used to indicate if any treatment has previously been received for gambling harm, and if so, the most recent previous provider of treatment to the client

| <b>R-D Recurrence indicator</b> | <b>Type of change</b>  | <b>Detail of change</b> | <b>Rationale</b>  |
|---------------------------------|--|-------------------------|---|
| 0                               | Not stated (Person asked but declined to provide a response) |                         | With the addition of a systemwide client ID, the recurrence indicator becomes redundant for services within the NGTS, unless accessed prior to DRF creation or from a non-NGTS source. To be analysed to inform treatment pathways. |
| 1                               | Yes – not known where  | Only if cannot specify  |   |
| 2                               | No   |                         |   |
| 3                               | Yes – GamCare/partner network                                | Added                   |   |
| 4                               | Yes – London Problem Gambling Clinic                         | Added                   |   |
| 5                               | Yes – Northern Gambling Service                              | Added                   |   |
| 6                               | Yes – Gordon Moody Association                               | Added                   |   |
| 7                               | Yes – other NHS provided service                             | Added                   |   |
| 8                               | Yes – other private healthcare service                       | Added                   |   |
| 9                               | Unknown  |                         |   |

**R-E End reason**

| <b>R-E End Reason</b>   | <b>Type of change</b> | <b>Detail of change</b>                     | <b>Rationale</b>                  |
|---|-----------------------|---|-----------------------------------|
| 9 Offered Assessment but DNA  | Removed               | Code split to add extra detail as requested | Additional detail to be collected |
| 16 Contact attempted to offer assessment – unable to make contact                   | Added                 |   |                                   |
| 17 Offered assessment but DNA – client cancellation                                 | Added                 |   |                                   |
| <b>ASSESSED ONLY</b>  |                       |   |                                   |
| 10 Not suitable for service – no action taken or directed back to referrer          |                       |   |                                   |
| 11 Not suitable for service – signposted elsewhere with mutual agreement of patient |                       |   |                                   |
| 12 Discharged by mutual agreement following advice and support                      |                       |   |                                   |
| 13 Referred to another therapy service by mutual agreement                          |                       |   |                                   |
| 14 Suitable for service, but patient declined treatment that was offered            |                       |   |                                   |
| 15 Deceased (assessed only)   |                       |   |                                   |
| 97 Not Known (assessed only)  |                       |   |                                   |
| <b>ASSESSED AND TREATED</b>   |                       |   |                                   |
| 42 Completed scheduled treatment  |                       |   |                                   |
| 43 Dropped out of treatment (unscheduled discontinuation)                           |                       |   |                                   |
| 44 Referred to other service  |                       |   |                                   |
| 45 Deceased (assessed and treated)  |                       |   |                                   |
| 98 Not Known (assessed and treated)   |                       |   |                                   |

**R-G Treatment Tier**

| <b>R-G Treatment Tier</b> | <b>Type of change</b> | <b>Detail of change</b> | <b>Rationale</b>                           |
|---------------------------|-----------------------|-------------------------|--|
| 2 Tier 2                  | New                   | New field               | Allows Tier 2,3,4 data to be distinguished |
| 3 Tier 3                  | New                   |                         |  |
| 4 Tier 4                  | New                   |                         |  |

### 14.1.4 Appointment Table

| Data Item Code | Data Item  | Mandatory (M)/ Required (R) | Input Code Table | Name | Format                   | Examples |
|----------------|--|-----------------------------|------------------|------|--------------------------|----------|
| X0             | Care Plan Number                                   | M                           |                  | X0   | N25                      |          |
| X1             | Local Patient Identifier                           | M                           | -                | X1   | N25                      |          |
| X2             | Provider code                                      | M                           | -                | X2   | A10                      |          |

| A12            | Use of self-exclusion tools since last appointment | M IF R4 =1                  | A-G              | A12  | N1                       |          |

#### 14.1.4.1 Appointment Codes

##### A-A Attendance

|   |  |
|---|--|
| 5 | Attended on time or, if late, before the relevant care professional was ready to see the patient |
| 6 | Arrived late, after the care professional was ready to see the patient, but was seen             |
| 7 | Patient arrived late and could not be seen   |
| 2 | Appointment cancelled by, or on behalf of, the patient   |
| 3 | Did not attend - no advance warning given  |
| 4 | Appointment cancelled or postponed by the health care provider                                   |

| A-E Treatment Setting | Type of change | Detail of change                                       | Rationale             |
|-----------------------|----------------|--|-----------------------|
| 1 Community           | New            | Additional field to record detail of treatment setting | For analysis purposes |
| 2 Residential         |                |  |                       |
| 3 Recovery house      |                |  |                       |
| 4 Retreat             |                |  |                       |
| 5 Other               |                |  |                       |

| A-B Appointment purpose |                                   | Type of change | Detail of change   | Rationale  |
|-------------------------|-----------------------------------|----------------|--|--|
| 1                       | Assessment                        |                |  |  |
| 2                       | Treatment                         |                |  |  |
| 3                       | Assessment and treatment          |                |  |  |
| 4                       | Review only                       |                |  |  |
| 5                       | Review and treatment              |                |  |  |
| 6                       | Formal structured follow-up       | Amend          | Wording amended to clarify that this applies only to formal follow-up appointments | To clarify appointment purpose                       |
| 7                       | Aftercare                         | New            | Addition   | To disambiguate this code from structured follow-ups |
| 8                       | Extended Brief Intervention (EBI) | New            | Addition   | Additional appointment purpose                       |
| 9                       | Other                             |                |  |  |
| 10                      | Not Recorded                      |                |  |  |

| A-C Appointment medium |                            | Type of change | Detail of change   | Rationale                         |
|------------------------|----------------------------|----------------|--|-----------------------------------|
| 1                      | Face to face communication |                |  |                                   |
| 2                      | Telephone                  |                |  |                                   |
| 3                      | Web camera (e.g. skype)    |                |  |                                   |
| 4                      | Online chat                |                |  |                                   |
| 5                      | Email                      |                |  |                                   |
| 6                      | Text message/Messaging App | Amended        | Changed from "short message service" to updated language including internet enable messaging (e.g Whatsapp and iMessage) | Remove outdated terminology       |
| 7                      | Other                      | New            | Additional code  | Code for future-proofing purposes |

| A-F Treatment attendees |            | Type of change | Detail of change  | Rationale                                 |
|-------------------------|------------|----------------|---|---|
| 1                       | Individual | New            | Added to capture further detail about nature of intervention provided | For future analysis of treatment outcomes |
| 2                       | Group      |                |   |   |
| 3                       | Couple     |                |   |   |
| 4                       | Family     |                |   |   |
| 5                       | Other      |                |   |   |

**A-D Intervention given:** This detail is only required if the appointment purpose at A5 is "treatment" or "assessment and treatment"

|    |  | Type of change | Detail of change | Rationale   |
|----|--|----------------|------------------|---|
| 1  | CBT (Cognitive Behavioural Therapy)                  | New            | Addition         | There are many different therapy/ treatment types offered by NGTS providers – this list is an attempt to provide greater detail than the previous list for the purposes of analysis of treatment outcomes, without covering every possibility and therefore making the list unwieldy. |
| 2  | Counselling  |                |                  |   |
| 3  | Structured psycho-social                             | New            | Addition         |   |
| 4  | 5 Step   | New            | Addition         |   |
| 5  | Brief advice   |                |                  |   |
| 6  | Psychotherapy  |                |                  |   |
| 7  | Psychodynamic therapy                                | New            | Addition         |   |
| 8  | Pharmacological                                      | New            | Addition         |   |
| 9  | Motivational Interviewing                            |                |                  |   |
| 10 | DBT (Dialectical behaviour therapy)                  |                |                  |   |

**A-G Use of self-exclusion tools since last appointment:** Record whether at the point of each contact client is using any self-exclusion tools (this could be schemes such as GamStop, blocking software, or bank transaction blocking). Check whether client has methods of circumventing exclusion for the restriction put in place (e.g. if still online gambling despite registering with GamStop).

|   | A-G Use of self-exclusion tools since last appointment | Type of change | Detail of change | Rationale   |
|---|--|----------------|------------------|---|
| 1 | Yes  | New field      | Addition         | To monitor usage of self-exclusion and outcomes for treatment |
| 2 | Yes, but have ability to circumvent                    |                |                  |   |
| 3 | No   |                |                  |   |
| 9 | Not stated   |                |                  |   |

## 14.2 Problem Gambling Severity Index (PGSI)

The PGSI is the most widely used measure of problem gambling behaviour in Great Britain. It consists of nine items and each item is assessed on a four-point scale: never, sometimes, most of the time, almost always. Responses to each item are scored as follows:

- never = zero
- sometimes = one
- most of the time = two
- almost always = three

Scores are then summed to give a total score which can range from a minimum of 0 to a maximum of 27.

When used as a population screening tool, the typical reference period used for the questions is “the past 12 months”. Within treatment settings, the scale is usually adjusted by providers so that clients are asked about their behaviour since their appointment, or in the past two weeks.<sup>14</sup>

The nine items are as listed below:

Thinking about the last [TIMEFRAME]...

1. Have you bet more than you could really afford to lose?
2. Have you needed to gamble with larger amounts of money to get the same feeling of excitement?
3. When you gambled, did you go back another day to try to win back the money you lost?
4. Have you borrowed money or sold anything to get money to gamble?
5. Have you felt that you might have a problem with gambling?
6. Has gambling caused you any health problems, including stress or anxiety?
7. Have people criticized your betting or told you that you had a gambling problem, regardless of whether or not you thought it was true?
8. Has your gambling caused any financial problems for you or your household?
9. Have you felt guilty about the way you gamble or what happens when you gamble?

A PGSI score of eight or more represents a problem gambler, that is, people who gamble who do so with negative consequences and a possible loss of control. This is the threshold recommended by the developers of the PGSI and the threshold used for this analysis.

Scores between three and seven represent ‘moderate risk’ gambling (people who gamble who experience a moderate level of problems leading to some negative consequences) and a score of one or two represents ‘low risk’ gambling (people who gamble who experience a low level of problems with few or no identified negative consequences).

<sup>14</sup> The consistency of the timeframe asked about by providers has been noted as a potential area for methodological improvement in the collection of DRF submissions.

### 14.3 CORE-10

CORE stands for “Clinical Outcomes in Routine Evaluation” and the CORE system comprises tools and thinking to support monitoring of change and outcomes in routine practice in psychotherapy, counselling and any other work attempting to promote psychological recovery, health and wellbeing. CORE System Trust owns the copyright on all the instruments in the system.

The CORE outcome measure (CORE-10) is a session by session monitoring tool with items covering anxiety, depression, trauma, physical problems, functioning and risk to self. The measure has six high intensity/ severity and four low intensity/ severity items.

Clients are asked to answer 10 items on a frequency response scale. Details of the items, response and scoring are as follows:

For each statement please say how often you have felt that way over the last week...

|  | Response option and corresponding item score |                   |           |       |                         |
|--|--|-------------------|-----------|-------|-------------------------|
|  | Not at all                                   | Only occasionally | Sometimes | Often | Most or all of the time |
| 1. I have felt tense, anxious or nervous                         | 0  | 1                 | 2         | 3     | 4                       |
| 2. I have felt I have someone to turn to for support when needed | 4  | 3                 | 2         | 1     | 0                       |
| 3. I have felt able to cope when things go wrong                 | 4  | 3                 | 2         | 1     | 0                       |
| 4. Talking to people has felt too much for me                    | 0  | 1                 | 2         | 3     | 4                       |
| 5. I have felt panic or terror                                   | 0  | 1                 | 2         | 3     | 4                       |
| 6. I have made plans to end my life                              | 0  | 1                 | 2         | 3     | 4                       |
| 7. I have had difficulty getting to sleep or staying asleep      | 0  | 1                 | 2         | 3     | 4                       |
| 8. I have felt despairing or hopeless                            | 0  | 1                 | 2         | 3     | 4                       |
| 9. I have felt unhappy   | 0  | 1                 | 2         | 3     | 4                       |
| 10. Unwanted images or memories have been distressing me         | 0  | 1                 | 2         | 3     | 4                       |

Scores are then summed to give a total score which can range from a minimum of 0 to a maximum of 40. A score of 40 would be classed as severe distress, 25 = moderate to severe, 20 = moderate, 15 = mild, with 10 or under below the clinical cut off.

**About GambleAware**

GambleAware is an independent charity (Charity No. England & Wales 1093910, Scotland (SC049433)) that champions a public health approach to preventing gambling harms.

GambleAware is a commissioner of integrated prevention, education, and treatment services on a national scale, with over £56 million of funding under active management. As an independent charity, GambleAware is regulated by the Charity Commission for England and Wales, and the Scottish Charity Regulator (OSCR).

For further information about GambleAware please contact [info@gambleaware.org](mailto:info@gambleaware.org).

**About ViewIt**

ViewIt Ltd is a University of Manchester start-up company, supported by GC Business Growth Hub, specialising in data management and analysis to provide a platform for simple reporting.

The company originates from the team that provides National Statistics production and validation for National Drug Treatment Monitoring Service outputs on behalf of Public Health England.
